

Out of the Ashes!

Exploring Natural Disasters!

Natural disasters are violent events outside the control of humans. They are caused by forces of nature that may result in loss of life, injury and damage to property. There are many types of natural disasters including: volcanos, earthquakes and tsunamis. Most natural disasters are impossible to prevent. The forces of nature that causes them are out of the control of humans. Their effects, however, may be reduced in several ways: by preparing for natural disasters, by preventing them where possible and by reducing the impact they have on people.

1**BRONZE**

Draw a picture of a natural disaster and label the different stages.

2**SILVER**

Research a natural disaster and make a keynote presenting all of the information.

3**GOLD**

Create a 3D model of a natural disaster of your choice.
